

## INTERNAL REFERENCE - USE PER CLIENT

# Free Client Wrap-Up Checklist

For each free or pilot client engagement (currently the two clients in progress). These aren't revenue - Sales is idle until Phase 2 - so the entire value of a free client is the proof it generates. This makes sure that proof actually gets pulled out instead of just finishing the work and moving on to the next thing.

## 1. Define "Done" - Before You're Deep In It

*The fastest way a free client quietly runs forever.*

- ☐ Scope of the free work is written down somewhere - what's included, what isn't
- ☐ An end date or completion trigger is set (e.g. "3 posts + 1 video, done by [date]")
- ☐ The client knows this is a limited engagement, not an ongoing free service

## 2. Harvest While You Work - Don't Wait Until the End

*Do this as things get made, not as a scramble on the last day.*

- ☐ Flag standout pieces for Case Study Builder as they're delivered, not after the fact
- ☐ Save any before/after or results data if it exists (engagement, reach, whatever's real)
- ☐ Note anything portfolio-worthy for Portfolio Showcase as you see it
- ☐ Watch for a natural testimonial moment - a strong reaction, a good result - and don't wait for wrap-up to ask

## 3. At Wrap-Up

- ☐ Send the testimonial ask  
*Testimonial Tracker*
- ☐ Build the case study  
*Case Study Builder*
- ☐ Add the best assets to the portfolio  
*Portfolio Showcase*
- ☐ Log the outcome - converted / did not convert / undecided - somewhere you'll actually see it again

## 4. Convert or Close

- ☐ Decide: offer a paid engagement, or close it out gracefully - don't let it drift unanswered
- ☐ If offering paid: send pricing/proposal before the free work ends, not after the energy's gone  
*Proposal Calculator, Service Pricing Admin*
- ☐ If closing: run the standard access/CRM teardown  
*Client Offboarding Checklist (Hub tool) - not duplicated here*

*This checklist is the layer above the Client Offboarding Checklist Hub tool, not a replacement for it - use this one first (harvest the proof, decide convert-or-close), then run the Offboarding Checklist for the access/CRM teardown mechanics once a client is actually closing out.*
