Hub Integration Roadmap

Which growth-stack tools the Hub feeds, and what becomes source of truth at each stage

ABOUT THIS DOCUMENT

Hub Integration Roadmap

Companion to the Technology Stack & Future-Proof Growth Plan. Covers what becomes source of truth at each growth stage, and what the Hub hands off versus keeps owning permanently.

The rule for every tool added in the Technology Stack & Future-Proof Growth Plan: the Hub keeps capturing what only it knows how to capture — client work, account assignment, ClickUp sync — and hands the rest off to the specialized tool built for that job. Once a tool for something exists, it becomes the source of truth for it. The Hub either feeds it, gets narrowed to whatever the new tool doesn't cover, or steps aside entirely. Never two systems holding the same record.

Already Wired — No Change Needed

Stripe

- Proposal Calculator generates the Payment Link the client pays from.
- Stripe's webhook writes results back into Contract & Invoice Tracker (paid, failed, subscription canceled) and triggers the account-manager alerts built this session.
- Already bidirectional. Nothing changes when QuickBooks or FreshBooks join.

ClickUp

- Sales Pipeline Board, Kickoff Prep's handoff, and Client Portal Manager's account-manager reassignment all push into ClickUp (Sales Pipeline + Onboarding Handoff lists, native Assignee, Account Manager field).
- ClickUp is already the source of truth for deal and task status — the Hub feeds it live and never re-shows a competing copy of it.

3+ Clients — FreshBooks Becomes Source of Truth for Invoicing

FreshBooks takes over retainer billing, deposits, and unused-balance tracking — the actual invoice record. QuickBooks Simple Start needs nothing from the Hub directly at this stage; Stripe and FreshBooks both sync into it natively on their own.

- Budget Pacing Tracker and Agency Health Dashboard's billing-status signal should reference FreshBooks once it exists, not the Hub's own invoice fields.
- No Hub-QuickBooks connection needed at any stage — it's downstream of FreshBooks/Stripe/Gusto/Productive, never fed by the Hub directly.
- Contract & Invoice Tracker stays Hub-owned for what FreshBooks doesn't do: SOW/contract signature status. Invoice amount, due date, and paid status should come from FreshBooks once it's live — stop hand-typing those into the Hub tracker.

First W2 Hire — Gusto Becomes Source of Truth for Payroll & PTO

- Team Onboarding & Offboarding's "Final pay / contractor invoice settled" checklist item becomes a Gusto action for W2 departures specifically, once Gusto is live.
- My Time Off stays the request/approval workflow and the shared-calendar sync — Gusto doesn't replace that part. Once Gusto exists, log each approved time-off request there too, so payroll reflects it correctly. Manual for now; worth an integration once volume justifies it.

5-10 Employees — BambooHR Becomes Source of Truth for the HR Lifecycle

This is the one that most overlaps with what got built today. BambooHR's onboarding workflows, offboarding checklists, employee records, org chart, and performance reviews directly cover most of what the new Team Onboarding & Offboarding tool exists for.

- Team Roster keeps the client-capacity and assignment logic BambooHR has no concept of. BambooHR becomes the record for formal employee data (role, employment type, org chart).
- Team Onboarding & Offboarding narrows to what BambooHR can't see: ClickUp seat/Teams assignment, Team Access Manager role, Revital Hub access, client reassignment (Client Portal Manager), Meta Business Manager / Google Ads MCC access.
- General HR items — agreement signed, welcome call, 30-day plan, performance reviews — move to BambooHR. Retire them from the Hub checklist rather than tracking both.

\$500K+ Revenue — Productive Is Not Needed

This is the one stage where the Growth Plan's default recommendation doesn't hold: the Hub was deliberately built to cover what Productive would add, not to hand this off. Resource Booking Calendar's own file header says outright it's "the Hub's own version of Productive's Resource Planner — By Person view," built specifically so Productive's resource-planning module wouldn't be needed.

Covered natively — no Productive needed for any of these:

- Billable rate by role (Team Roster's per-person hourly rate).
- Retainer utilization / budget vs. actuals (Budget Pacing Tracker).
- Resource planning — crew booked against capacity without conflicts (Resource Booking Calendar).
- Client profitability ranking (Agency Health Dashboard's margin-sorted table).
- True cost per project, not just per client (Aug 2026) — Budget Pacing Tracker now supports more than one tracked project per client at once (**client.budgetPacingList**), and Hours & Time Log entries can be tagged with a Project so a retainer and a one-off shoot running at the same time get their cost/margin told apart instead of blended together.

30-50 Employees — Rippling Absorbs Gusto + BambooHR

Rippling unifies HR, IT, and payroll — provisioning a laptop, benefits, and email from one action. It still won't know about Revital-specific systems: ClickUp, the Hub itself, Team Access Manager roles, or Client Portal Manager's account-manager sync.

- Team Onboarding & Offboarding stays exactly as narrowed at the BambooHR stage — just swap the checklist's tool references from Gusto/BambooHR to Rippling.

What Stays Hub-Owned, Permanently

None of the tools in the Growth Plan have an equivalent for Revital's actual service-delivery workflow — these stay Hub-owned at every stage, no matter how big the team gets:

- Client Portal and everything client-facing (approvals, mood boards, reports, checklists).
- Kickoff Prep & Deck and the Sales → Delivery Handoff, including the ClickUp assignee sync.
- Client Portal Manager, including the account-manager reassignment → ClickUp sync.
- Team Access Manager and every audit/QC/brand/strategy tool — Revital's own IP, not something any of these SaaS tools do.

How to Action This at Each Stage

- When a new tool from the Growth Plan actually gets added, the work is: stop double-entering into the Hub tool it overlaps, decide feed vs. retire per the mapping above, and relabel the onboarding/offboarding checklist to name the new tool.
- None of this needs an API-level build today — none of these tools are live yet. Treat this as the decision made in advance; build an actual sync once volume justifies the engineering time.

Google Workspace (Business Plus) — Feature Setup

Decided September 2026: staying on Business Plus rather than downgrading to Standard, specifically for the storage headroom raw footage needs. Of the plan's other Plus-exclusive features, here's what's actually worth setting up, and in what order.

Storage — 5TB/user pooled (20TB total at 4 licenses)

- **The deciding factor to stay on Plus.** Standard's 2TB/user (8TB pooled at 4 licenses) is real risk once raw footage volume grows — Plus's pool gives real runway instead.
- No setup required today. As footage volume grows, route it into Drive instead of external drives to actually use the headroom being paid for.

Vault — retention & legal hold

- Zero cost to leave unconfigured — already bundled into Business Plus either way, no separate charge.
- **No rush.** Revisit before any client contract dispute, a legal hold need, or once a client requires formal records retention.

Advanced endpoint management

- Currently enrolled at Fundamental management. All 17 registered devices are personally owned (Juan, Olaoluwa, Ronald W., admin) — none are company hardware.
- Switching to Advanced would require a screen-lock/encryption policy on those personal laptops to keep syncing work email/Drive, and allow wiping the Workspace account only (not personal files) if a device is lost or someone leaves.
- **Action:** send the team a heads-up before enabling — it changes login requirements on their own machines — then turn it on.

Secure LDAP

- No use case without a physical office — nothing on-prem to authenticate against yet. Revisit once an office or on-prem equipment exists.

500-participant Meet cap

- Not used — weekly active Meet users tops out at 4 (the internal team). No action needed unless client webinars or large events start happening.

UPDATE — SEPTEMBER 2026

ClickUp Section Correction (Page 1)

Correction to the “Already Wired — ClickUp” section on page 1 of this roadmap.

“ClickUp is already the source of truth for deal and task status”

Revision note: This session added a parallel HubSpot Deal/Contact/Note/Owner sync to the Sales Pipeline Board, Kickoff Prep's handoff, and Client Portal Manager's account-manager reassignment — the same call sites already feeding ClickUp. HubSpot is now the real CRM (linked Contact records, resolved deal owner, first-touch Notes) — a genuine upgrade over ClickUp's flat text fields. ClickUp still runs in parallel and is unchanged for task/deliverable tracking, but it is no longer accurate to call it the source of truth for deal status specifically — that role is shifting to HubSpot. No formal cutover decision has been made yet; both stay live until this note is updated again.
