Business Gap Priority Punch List

Ordered by risk and cost - not everything needs to happen at once

Business Gap Priority Punch List

This pulls together every gap flagged across the Hub audit, the software/insurance wishlist, and lead-data review into one ordered list. Ordering is by risk exposure and cost/effort to close - not by which came up first in conversation.

This pulls together every gap flagged across the Hub audit, the software/insurance wishlist, and lead-data review into one ordered list. Ordering is by risk exposure and cost/effort to close - not by which came up first in conversation.

Tier 1 - Do now (zero or near-zero cost, real current risk)

Close these first - none require real budget.

1. **Turn on Dropbox Sign - \$15/mo.** You already have the full setup guide saved and waiting - this is the fastest win on the list. Replaces the current print/sign/scan process immediately.
2. **Start logging Weekly Account Check-Ins and Meeting Notes - Free.** The tools already exist in the Hub and are empty for every client. Costs nothing but time, and it's the only real paper trail you'd have if a client ever disputes what was delivered or when.
3. **Fill in missing lead email/website - Free.** 22 of 26 leads are missing this. Right now you likely can't reach or research most of your own pipeline.
4. **General Liability Insurance - ~\$400-600/yr.** Standard baseline for a service business - should already be in place before any on-site AV or event work.
5. **Errors & Omissions Insurance - ~\$500-1,500/yr.** You're already giving marketing/consulting advice today - this risk exists now, not just once AV/live events restart.
6. **Enable Firestore scheduled backups - ~pennies/mo (~\$0.29/GiB/month storage).** The Hub's "Export All Data" button only downloads a JSON file to a local Downloads folder - easy to lose track of, not automatic. Firestore's built-in scheduled backups run automatically instead, at negligible cost for a database this size. Setup: console.cloud.google.com -> same project as the Hub's Firebase project -> Firestore -> Databases -> find the "Scheduled backups" column and click Edit settings -> check Daily and/or Weekly, set a retention period (up to 14 weeks), Save.

Tier 2 - Do soon (real cost or effort, compounds if delayed)

Worth budgeting for in the near term.

1. **Cyber Liability Insurance - ~\$400-1,600/yr.** Client data already lives across Firestore, LucidLink, Frame.io, HubSpot and Klaviyo. None of the insurance above covers a breach or ransomware event.
2. **A real SEO tool (Ahrefs or SEMrush) - \$129-249/mo.** SEO is already a sellable line item in your price catalog with no real tool behind it - right now that work is manual or free-tool based.

3. **A real email platform account (Klaviyo or Mailchimp) - \$20-65+/mo.** Same gap - Email Marketing is priced and sold, but there's no live account running it.
4. **Buffer or Sprout Social - \$5-199/mo.** Organic/Paid Social is sold as a service with no real scheduling tool behind it - posting is manual right now.
5. **Adobe Creative Cloud or Canva Pro - \$15-70/mo.** Needed for the Branding & Design service - and likely part of why Brand Guidelines Builder, Brand Asset Kit, and Mood Board Builder came back completely empty in the Hub audit. Nothing to put in them without a design tool.
6. **AgencyAnalytics - \$59-229/mo.** Would automate the Monthly Report tool, which the Hub audit found essentially unused.
7. **HubSpot Marketing Hub - a real account - \$20+/seat/mo.** Same "priced but not confirmed live" gap as the email platform above.
8. **OpenPhone - \$15-23/user/mo.** A real business line separate from your personal cell - matters most as soon as you start working the leads from item 3 above.
9. **Bitwarden Teams - \$4/user/mo.** Cheap insurance against password sprawl before the team grows past just you.

Tier 3 - Trigger-based (hold until the relevant phase actually starts)

Don't tie up cash in tools sitting idle.

1. **AV/live production stack (Rentman, Cheqroom, Vectorworks, Logic Pro, QLab, etc.) - varies, several thousand \$/yr combined.** Only makes sense once the live-events side is actually restarting - buying ahead of that just ties up cash in idle subscriptions.
2. **Equipment / Inland Marine Insurance - ~\$500-550/yr.** Same trigger as above - matters once real equipment purchases begin, not before.
3. **Ramp or Brex - Free (interchange-funded).** A nice-to-have once spend across the growing tool stack is large enough that automatic tracking beats the existing Subscription Tracker.

Tier 4 - Deferred (already tracked elsewhere)

Not duplicated on this list.

■ **QuickBooks upgrade, Gusto, BambooHR, Rippling, Productive.** These live in the separate Technology Stack & Future-Proof Growth Plan doc, triggered by headcount/revenue milestones rather than by current risk - intentionally not repeated here.

Not covered in this list: the dozens of other Hub tools outside the Execution section that haven't been audited yet (Onboarding, Client Portal, sales-pipeline tools, Strategy/SEO/Ads block, etc.). Those are unknowns, not confirmed gaps.

UPDATE — SEPTEMBER 2026

Tier 1, Item 6 — Already Done

Checked directly in the Google Cloud console (Firestore → Disaster Recovery) rather than assuming.

Enable Firestore scheduled backups

Revision note: Already enabled — not a gap. Daily backups retained 30 days, weekly backups retained 98 days (every Sunday), with real snapshots going back through this week confirmed live in the console. Point-in-time recovery is separately still Disabled, which is a different, optional feature (restore to any exact moment, not just daily/weekly snapshots) — worth considering later if finer-grained recovery ever matters, but it does not affect this item being closed.

UPDATE — SEPTEMBER 2026

Tier 1, Item 1 — Wrong Tool Named

Corrected directly from Ronald: the agency is already on DocuSign, not Dropbox Sign.

Turn on Dropbox Sign

Revision note: This item named the wrong e-signature tool. Revital is on DocuSign, not Dropbox Sign — the "full setup guide already saved and waiting" is the E-Signature Setup Guide — DocuSign doc, priced at \$25-45/mo (Standard plan), not the \$15/mo Dropbox Sign figure this item quoted. Dropbox Sign only appears elsewhere as a cheaper alternative Revital considered and did not choose. The underlying gap still stands as written — the print/sign/scan process hasn't been replaced yet — just correct the tool name and cost to DocuSign / \$25-45/mo when actioning this.
