Sales → Delivery Handoff

Hub Automation — how an account manager gets assigned and notified the moment a deal closes

ABOUT THIS DOCUMENT

Sales → Delivery Handoff — Hub Automation

Addendum to Complete System Flows & Process Map — Section 2, Onboarding Flow. Documents how an account manager gets assigned and notified the moment a deal closes.

Why This Exists

The documented onboarding flow assumes an account manager is already known by the time the intake form goes out, and that a formal “Sales → Delivery Handoff Form” gets submitted in ClickUp on Day 2. In the Hub, neither existed: the account manager field on a client's portal config was a manual free-text entry nobody was prompted to fill in, no handoff was ever logged, and nobody was notified when a deal closed. This addendum documents the fix built into the Hub to close that gap.

Updated Flow

1. Deal reaches Closed Won on the Hub's Sales Pipeline Board. This save also updates the matching ClickUp task's status directly (existing Hub → ClickUp sync) — ClickUp stays the record of truth, no separate step needed there.
2. Hub fires automatically: logs “Deal marked Closed Won” to the admin activity log, and pushes an in-Hub notification: “{Client} marked Closed Won — create their Hub client profile if needed, then complete the Sales → Delivery Handoff in Kickoff Prep & Deck.”
3. Whoever owns that notification opens Kickoff Prep & Deck → Sales → Delivery Handoff. (If the client doesn't have a Hub profile yet, create one first — that step is still manual, same as the documented Day 1 Hub Setup.)
4. Selects the Account Manager from a Team Roster dropdown (not free text). Adds AM phone (optional) and handoff notes for delivery — budget nuance, sensitivities, promises made, timeline expectations.
5. Clicks “Complete Handoff & Notify Account Manager.” This single action: sets accountManagerName/Email/Phone on the client's portal config (Client Portal Manager stays in sync), writes a deliveryHandoff record (who, when, notes), logs the handoff to the admin activity log and pushes an in-Hub confirmation, and emails the assigned account manager directly with the client name and handoff notes.
6. Account manager proceeds with onboarding — Hub Setup, Welcome Guide, Kick-Off Call — using the Discovery Call recap and auto-generated client-facing slideshow already sitting in Kickoff Prep & Deck for that call.

What's Still Manual, on Purpose

- Who the account manager should be. There's no rule in place — round robin, by closer, by current capacity — so a person picks from the dropdown each time rather than the system guessing.

- Creating the Hub client profile itself. Closed Won can fire before a Hub profile exists (same as the documented Day 1 Hub Setup step) — the notification says so explicitly.

- The notification is a prompt, not a guarantee. It's the same in-Hub bell mechanism used elsewhere in the Hub — someone still has to see it and act.

Where This Lives

- **kickoff-prep/index.html + kickoff-prep/js/app.js** — Sales → Delivery Handoff section (account manager assignment, handoff logging, notification).

- **sales-pipeline-board/js/app.js** — **notifyDealWon()**, fires when a lead's stage transitions to Closed Won.

- **app.js** (root) — **emailAccountManagerHandoffNotification()**, sends the account manager's notification email.

UPDATE — SEPTEMBER 2026

HubSpot Sync Added to the Closed-Won Flow

The Closed Won automation described on the previous pages now writes to HubSpot as well as ClickUp.

Step 1 — Deal reaches Closed Won

Revision note: This save now also creates/updates the matching HubSpot Deal (with linked Contact, resolved owner, and a first-touch Note), in parallel with the existing Hub → ClickUp sync. Correction to the earlier framing: the Hub itself is the authoritative record — ClickUp and HubSpot are both mirrors fed from it, not sources of truth in their own right.
