Where to Log What

Hub vs. ClickUp — quick reference for which system is the source of truth at each step of the client lifecycle.

OPERATIONS REFERENCE

Where to Log What: Hub vs. ClickUp

A quick reference for which system is the source of truth for each step of the client lifecycle — from first lead through offboarding.

What You're Doing	Where It's Logged	How Often
New lead comes in / deal stage changes	ClickUp (CRM Deal record)	As it happens
Sending a proposal	Hub (Proposal Calculator) + ClickUp (Deal Stage)	Per deal
Following up on an open proposal	Hub (Proposal Follow-Up Tracker)	Weekly
New platform access received	Hub (Access & Login Log)	Per platform, at onboarding
New ad account set up	Hub (Client Ad Account Log)	Per platform, at onboarding
New deliverable to produce	ClickUp (Campaign Briefs list)	Per deliverable
Reviewing a deliverable before it goes to the client	Hub (QC Checklist)	Per deliverable
Client asks for a revision	ClickUp (Client Feedback & Revisions)	Per revision
Monday account check-in	Hub (Weekly Account Check-In)	Weekly, per active client
Monthly performance report	Hub (Monthly Report) built, then filed in ClickUp (Reports & Analytics)	Monthly
Client offboarding — access handoff	Hub (Access & Login Log — Date Removed)	Once, at offboarding
Client offboarding — deal closed	ClickUp (Deal → Closed/Inactive)	Once, at offboarding

UPDATE — SEPTEMBER 2026

HubSpot Added Alongside ClickUp

This session added a real HubSpot Deal/Contact/Note/Owner sync to the Sales Pipeline Board, running in parallel with the existing ClickUp sync.

New lead comes in / deal stage changes • Client offboarding — deal closed

Revision note: Both rows now sync to HubSpot as well as ClickUp. HubSpot is the real CRM going forward — it holds a linked Contact record, deal-owner matching, and first-touch Notes, none of which ClickUp's flat fields could do. ClickUp is kept running in parallel for now (it's still the task/deliverable system of record for the other rows in this table), but its CRM role is expected to be phased down once HubSpot is fully validated. No cutover has happened yet — treat both as live until this note is updated again.
