# Testimonials, Content Cadence & Growth Note

A testimonials section draft, a lightweight content cadence, and a short strategy note on capacity and the push toward bigger clients.

## OVERVIEW

# Testimonials, Content Cadence & Growth Notes

---

Covers three items: a testimonials section draft for the website, a lightweight content/blog cadence built around the Marketing News feed, and a short strategy note on capacity and the push toward bigger clients.

## 1. Website Testimonials Section (draft)

There's no live access to Firestore data to pull actual saved quotes from Testimonial Tracker, and quotes shouldn't be invented and attributed to real clients (Orixia, Fork and Fingers, Meero's Kitchen, etc.) — that would be a fabricated endorsement. What follows is the section structure and copy scaffolding, ready to drop into Framer once real quotes are pasted in from Testimonial Tracker.

### Section heading options:

- “What brands on the rise are saying”
- “In their words”
- “Straight from our clients”

**Placement:** Between “Our projects” and “Pricing” — gives a prospect proof right before they hit the price, which is the natural place for hesitation.

### Card format (repeat 3–4 times):

“[Real quote from Testimonial Tracker — 1-3 sentences, specific if possible: what you did, what changed, how it felt to work with you.]”

— [Client name], [Title/Company]

[Project type tag, e.g. “Brand Strategy” / “Live Event” / “Web Design”]

### Notes:

- Prioritize quotes that mention a specific outcome or number over generic praise (“they were great to work with” is weaker than “our booking rate jumped after launch”).
- If only 1–2 strong quotes exist right now, ship the section with those rather than waiting for four — a couple of real ones outperform a full row of generic ones.
- Consider a matching short-form version (1 quote + logo) reused near the “Book a discovery call” CTA at the bottom of the page, not just mid-page.

**Action:** open Testimonial Tracker, pull the 3–4 strongest quotes, and paste them into the template above.

## 2. Content / Blog Cadence (Using Marketing News as Input)

**Cadence:** one post every two weeks — sustainable for a small team, frequent enough that Google and repeat visitors notice, and roughly matches what the Marketing News feed will surface as “worth reacting to” in a given stretch.

#### Four content pillars:

- 1 **Trend reaction** — take one headline surfaced in Marketing News and give a short, opinionated take on what it means for small/growing brands. Low lift: the sourcing is already automated, this is just the write-up.
- 2 **Behind the scenes** — process content from actual shoots/events/builds already happening (a phone photo + 200 words is enough).
- 3 **Client spotlights** — short case-study-style posts once real outcomes exist to share (ties directly into the proof-point gap — this is where flagship case studies would live).
- 4 **Practical how-to** — tactical tips for “brands on the rise”: how to prep for a first brand shoot, what to have ready before a live event, what goes into a visual identity package. Builds authority and targets people early in their search.

#### Workflow:

- Rotate ownership rather than assigning it to one person permanently — sustainable pace matters more than who writes it.
- Host as a Framer CMS blog collection so it lives on-domain (better for SEO than an external platform).
- Repost/link from the existing Instagram, Facebook, and LinkedIn accounts already in the site footer — no new channel needed.

#### Starter topic list:

- 1 “3 marketing trends worth reacting to this month” (trend reaction)
- 2 “What actually happens on a Revital shoot day” (behind the scenes)
- 3 “How [client] used live streaming to extend a one-night event into a week of content” (client spotlight — once a client agrees to be featured with real numbers)
- 4 “5 things to have ready before your first brand shoot” (how-to)
- 5 “Brand strategy vs. visual identity: what's actually the difference, and which do you need first” (how-to, also doubles as pricing-page education)
- 6 “What we watch for before setting up a Google Ads account” (how-to / trend reaction hybrid)
- 7 “Inside a live event build: lighting and audio decisions nobody sees” (behind the scenes)
- 8 “Why 'brands on the rise' need a different playbook than established brands” (positioning piece)

### 3. Capacity & Bigger-Client Push (Strategy Note)

**Where things stand:** hours-based capacity tracking just went live for production/creative roles, and per current read there's no active bottleneck right now. That's useful on its own — it means there's room before it becomes a constraint, which is the ideal time to make a deliberate choice about what fills it.

**The suggestion:** don't let that open capacity get absorbed by default into more of the same size/type of project. Point at least some of it at business development aimed at the “Enterprise” (\$3,000+) campaign tier, which is currently underrepresented in both booked work and public case studies.

**A concrete loop to run on this:**

- 1 Let 2–4 weeks of real data accumulate in Hours & Time Log now that logging is actually happening.
- 2 Check Team Roster's hours-based capacity bars to see which roles genuinely have room (Video Editor and Web Developer capacity will look different from Paid Media Lead's) — that shows which kind of new business the team is actually staffed to take on right now.
- 3 Pair that with 1–2 flagship case studies from clients willing to share real numbers (ties back to the testimonials/proof-point gap) — usually the deciding factor for a prospect sizing up whether to book the \$3,000+ tier instead of the \$1,200 one.

This isn't a one-time task so much as a habit: the capacity data is now live and free to check, so it's worth glancing at before each new-business push rather than only when something feels overbooked.

### 4. Ad/Creative Research Tools (“Board of Ads and What's Performing”)

Came up while looking into Motion (motionapp.com) — worth keeping as a reference next time competitor/trend ad research comes up. Cheapest to most built-out:

- **Meta Ad Library** (ads.meta.com) — official, completely free. Search any advertiser or keyword, see every ad they're currently running on Facebook/Instagram. No save/board feature and no cross-brand trend view — one advertiser at a time.
- **Motion's Creative Research** — free, just launched as part of motionapp.com (the ad-analytics Motion, not the calendar app usemotion.com). Track competitors on paid social, browse curated collections of high-performing ads, save Meta/TikTok ads to a swipe file. Closest match to “a board of ads and what's performing.”
- **Foreplay** — paid, built for teams: shared boards, annotations, and turning saved ads directly into creative briefs. Worth it only if/when the team wants to collaborate on the same board rather than one person browsing.

**Starting point:** Motion's Creative Research — it's free and already tied to the Motion product from earlier research. Move to Foreplay only if the team outgrows a single-user swipe file.
