Team Access SOP

Restricting Hub sections by role — how to set up, manage, and audit sidebar access for each teammate.

Team Access — Restricting Hub Sections

Owner: Admin (Hub owner account only)

Trigger: A new teammate is given a Revital Hub login, or an existing teammate's access needs to change

The Hub supports restricting a teammate's sidebar to only the sections they need. This is a menu-level convenience, not a hard security boundary — it hides sections from the nav so people aren't confused by tools that don't apply to their role. It does not replace proper Firestore-level access rules.

How to Set It

- 1 Log in as admin.
- 2 Open **Team Access** from the sidebar bottom (admin-only).
- 3 Add the teammate's email and pick an **Access Role** from the dropdown (or “— Custom —” for a one-off).
- 4 Save. The restriction applies on their next load/refresh.

Managing Roles

Roles are managed at the top of the Team Access page. Renaming a role carries over automatically to everyone assigned it. A role can't be deleted while anyone is still assigned to it.

Access Roles

Role	Sections Granted	Example Titles
Full Access — Leadership	All sections	Founder/CEO, Creative Director, Executive Producer, COO, Head of Strategy
Sales & Business Development	Sales Pipeline, Retention & Social Proof, Strategy & Competition	Various sales titles
Account Management / Client Services	Core, Ad Accounts & Access, Reporting & Health, Production, Content Creation, Account Ops, Retention & Social Proof	Producer / Senior Producer / Account Manager / etc.
Digital Marketing	Ad Accounts & Access, Reporting & Health, Content Creation, Account Ops, Audits, Strategy & Competition	Various marketing specialist titles
Operations & Admin	Core, Ad Accounts & Access, Account Ops, Agency Globals	Studio Manager / Ops Manager / EA / Bookkeeper / HR Coordinator

Notes

- No Team Access entry for someone means unrestricted access (full sidebar).
- Restricted teammates can never open Team Access themselves — no self-escalation.
- Use the closest matching role, or “— Custom —” if a title isn't listed.
- Deleting or renaming a role affects everyone currently assigned to it.
- If someone reports a “missing” section, check Team Access first.
- Watch for inline warnings on Custom entries about unrecognized section keys needing re-save.
