

REVITAL PRODUCTIONS

Software & Insurance Wishlist

What Revital needs to fully deliver on the services already being sold — and the tools blocked purely by budget, not by need.

ABOUT THIS DOCUMENT

What This Covers

This is deliberately separate from the Technology Stack & Future-Proof Growth Plan. That document covers tools triggered by headcount and revenue milestones — QuickBooks upgrades, Gusto, BambooHR, Rippling, Productive. Nothing here duplicates that list. This one covers gaps that exist right now, at 3 people, with active clients — not gaps that show up later as the team grows.

GAPS TODAY

Marketing Service Delivery Tools

Several services in the Service Pricing Admin catalog — SEO, Email Marketing, Reporting, the new Branding & Design category — are sellable today but don't have a real tool behind them yet.

Tool	Est. Cost	Category	Why It's Needed
Ahrefs or SEMrush	\$129–249/mo	SEO	Real keyword research, rank tracking and backlink audits for the SEO services already in the price sheet — right now that work is manual or free-tool based.
Buffer or Sprout Social	\$5–199/mo	Social	Actual scheduling/publishing for Organic Social & Paid Social instead of posting manually to every platform.
Adobe Creative Cloud or Canva Pro	\$15–70/mo	Design	Needed to deliver the new Branding & Design services — logo design, brand guides, social templates.
AgencyAnalytics	\$59–229/mo	Reporting	Automates Monthly Report Delivery and the various Reporting line items instead of hand-building client reports.
Klaviyo or Mailchimp — a real account	\$20–65+/mo	Email	The Email Marketing services are already in the price catalog, but there's no live account behind them yet.
HubSpot Marketing Hub — a real account	\$20+/seat/mo	CRM / Automation	Same gap as above — it's priced as a sellable line item but not confirmed as a tool actually in use.
Framer	From ~\$15–35/mo per site	Web Dev	For client sites where design speed/animation matters most — portfolios, campaign pages, service-based sites without heavy content or e-commerce.
Webflow	\$19–39/mo per site	Web Dev	For client sites needing deeper CMS control, technical SEO, or small-scale native e-commerce that Framer can't handle well.
Shopify Plus	~\$2,300/mo+	Web Dev / E-commerce	For a client whose store outgrows small-scale — fastest to launch, biggest app ecosystem, best for high-volume selling without heavy customization. Base fee plus a small % of sales past \$800K/mo.
BigCommerce Enterprise	\$1,000–15,000+/mo	Web Dev / E-commerce	Alternative to Shopify Plus for a client with a large/complex catalog, B2B pricing rules, or multi-storefront needs — more native features, fewer paid apps required. Custom-quoted by volume.

FUTURE LAUNCH

AV / Production Equipment & Software

Revital's original business, paused while marketing funds the eventual AV/live-events launch. These are the tools and gear that unlock actually running that side again.

Item	Est. Cost	Why It's Needed
DaVinci Resolve Studio (additional seats)	\$295 one-time/seat	You already have a license — this is for when additional editors/team members need their own copy. One-time cost per seat, no subscription.
Rentman	\$14–39/user/mo	AV/event rental scheduling — crew assignments, equipment calendar and double-booking prevention, quoting-to-invoicing. Built specifically for AV rental and event production companies; syncs with QuickBooks and Stripe.
Cheqroom	From ~\$184/mo (unlimited assets, priced per gear manager)	Equipment checkout and asset tracking — QR/barcode check-in/out for cameras, audio and lighting gear, plus maintenance scheduling. Keeps track of what's out, with whom, and what needs servicing.
Camera / audio / lighting upgrades	Varies, often \$2,000–\$10,000+	Core AV production equipment for shoots.
Live event AV gear (mixers, PA systems, projectors)	Varies, often \$5,000+	Needed to actually run live events once that side of the business launches.
Vectorworks Spotlight	\$153/mo or ~\$2,530/yr	Industry-standard AV/lighting/rigging technical drawings — precise 2D/3D floor plans, lighting plots, truss and staging diagrams. Pairs with Braceworks for structural rigging calculations. The standard tool for touring and corporate AV production.
Braceworks	~\$300–500/yr add-on	Structural rigging load calculations for hanging speaker arrays and trussing — the actual safety math, not just the drawing. A separate paid add-on to Vectorworks Spotlight; only bundled with a Spotlight or Design Suite subscription, not included by default.
Allseated (rebranded Prismm)	Custom quote — no published pricing	Client-facing 3D floor plans, seating charts, and AR/VR walkthroughs for corporate events, weddings and banquets. Real-time collaboration with clients before the event.
SketchUp	Free – \$820/yr by tier	Fast, low-cost 2D/3D room and staging mockups. Good entry point to start learning the floor-plan workflow now, before investing in Vectorworks once live-event bookings are real.
QLab	Free (basic) – \$299–\$999 one-time (Audio/Video/Lighting licenses)	Cue-based show control for macOS — sequences audio, video and lighting cues into one timeline triggered live during a show. Standard for corporate AV and theatrical show calling.
Shure Wireless Workbench (WWB)	Free	RF frequency coordination — plans wireless mic/IEM frequencies ahead of a show to avoid interference. Essential once multiple wireless mics are running in the same room as other RF traffic.
L-Acoustics Soundvision / d&b ArrayCalc	Free (manufacturer-specific)	Speaker system prediction software — models a venue's dimensions and simulates PA coverage/SPL before load-in, so hang points and box counts are planned, not guessed. Which one to use depends on the PA brand being rented.
vMix	Free (Basic HD, 720p) – from \$60 one-time (perpetual license, no subscription)	Live multi-camera video switching, graphics overlays, recording and streaming for hybrid/livestreamed events. One-time license, no recurring cost.
Capture	Licensed per fixture count (custom pricing)	Offline lighting visualizer and console programmer — pre-program and preview lighting cues on a laptop before load-in instead of programming live on-site. Pairs with Vectorworks

Item	Est. Cost	Why It's Needed
		Spotlight's lighting plots.
Frame.io	\$15–50/user/mo + storage	Client review & approval on video cuts — timecoded comments directly on the footage and version history, so clients mark up edits precisely instead of over email.
LucidLink	\$7–32/member/mo by tier	Mounts shared cloud footage as a local drive so editors work directly in Premiere/Resolve off shared raw footage — no more waiting on downloads or juggling physical drives once more than one person touches a project.
Epidemic Sound	From ~\$6–10/mo	Royalty-free music and SFX licensing for client video deliverables — avoids copyright strikes/takedowns on published content. Larger catalog than most competitors, stems included with every track.
Final Draft	\$249 one-time	Industry-standard screenwriting software for script development — proper screenplay formatting, revision tracking, collaboration.
Logic Pro	\$199 one-time (Mac only)	Full DAW for music producing, mixing and band recordings — a fraction of Pro Tools' cost for the same core workflow. Pro Tools is the alternative if cross-studio/Windows compatibility is needed, but it's subscription-based and pricier.
iZotope Ozone	\$55–499 by tier	Mastering suite — takes a finished mix to a release-ready final master.
iZotope RX	\$99–1,399 by tier	Audio repair and cleanup — removes hum, clicks and background noise from band/location recordings.
Splice	~\$10–12/mo	Sample and loop library subscription for sound design work.
grandMA3 onPC	Free (software only; hardware control surfaces cost extra)	Industry-standard lighting console software for live production — full-featured for free until a physical control surface is added.
OBS Studio	Free	Free live streaming/switching software — a no-cost fallback or complement to vMix for live streaming.
Blackmagic ATEM switcher	\$1,095–1,865 (Mini Extreme/Constellation HD) up to \$7,995+ (Constellation IP)	Dedicated hardware video switcher — the actual broadcast-industry standard above the software tier vMix operates at. Worth it once live production volume justifies a physical switcher over a laptop-based workflow.

RISK MANAGEMENT

Business Protection

None of these show up as a line item anywhere else in the Hub, and all three matter once client work involves on-site AV, live events, or paid marketing advice.

Coverage	Est. Annual Cost	Why It's Needed
General Liability Insurance	~\$400–600/yr	Needed before any on-site AV or event work — standard for a low-risk service business.
Errors & Omissions (E&O) Insurance	~\$500–1,500/yr	Protects against client disputes over marketing or consulting advice given.
Equipment / Inland Marine	~\$500–550/yr (avg.)	Different from GL and E&O — covers the AV gear itself

Coverage	Est. Annual Cost	Why It's Needed
Insurance	\$43/mo)	(cameras, lighting, drones) against loss, theft or damage in transit or on-site. Worth having once real equipment purchases start.
Cyber Liability Insurance	~\$400–1,600/yr	Covers data breach/ransomware response — forensics, legal review, client notification. Client data already lives across Firestore, LucidLink, Frame.io, HubSpot, Klaviyo and the Hub itself, none of which GL, E&O or Equipment coverage touches.

DAY-TO-DAY OPERATIONS

Business Operations

A few operational gaps that aren't marketing- or AV-specific, but affect how the business runs day to day.

Tool	Est. Cost	Why It's Needed
DocuSign	\$25–45/mo	Legally binding e-signatures on contracts — replaces the current print/sign/scan process. Needs the Standard plan (not Personal) since the SOW/MSA workflow relies on reusable Templates, which Personal doesn't include. Setup steps are in the E-Signature Setup Guide.
OpenPhone (or Grasshopper)	\$15–23/user/mo + ~\$20 one-time registration	A real business phone line, separate from your personal cell — useful right now for calling/texting the leads that only have phone numbers on file, and standard once you're doing business development at any real volume.
Bitwarden Teams (or 1Password)	\$4/user/mo (Bitwarden) or \$19.95/mo flat for up to 10 (1Password Teams Starter)	Shared, audited access to logins — ClickUp, Stripe, ad accounts, social accounts — instead of passing passwords around directly. Worth having before the team grows past just you.
Ramp or Brex	Free (revenue from card interchange, not subscription fees)	Business expense cards with automatic transaction-level tracking and receipt capture — catches spend the Subscription Tracker wouldn't (one-off equipment/vendor purchases), on top of the recurring-software view that tracker already covers.

REFERENCE

Alternative Options

Where a strong alternative came up in discussion for a tool already on this list, it's noted here rather than duplicating a full line item above.

Primary Pick	Alternative(s)	When to Consider It Instead
OpenPhone (or Quo)	Grasshopper; Dialpad; RingCentral	Grasshopper is simpler/cheaper with no frills. Dialpad leans harder into AI call transcription. RingCentral is built for scaling well past a small team — likely overkill right now.
Bitwarden Teams	1Password Teams	Nearly identical feature set — 1Password costs more per seat but has a slightly more polished interface.
Logic Pro	Pro Tools	Pro Tools is the true industry standard and works cross-platform (Windows + Mac), but it's subscription-based and

Primary Pick	Alternative(s)	When to Consider It Instead
		pricier than Logic's one-time fee.
Epidemic Sound	Artlist	Artlist has a smaller music catalog but bundles in stock footage, video templates and LUTs — worth a look if footage/templates matter as much as music.
vMix	OBS Studio (free); Blackmagic ATEM (hardware)	OBS is the free software-only fallback; Blackmagic ATEM is the physical-switcher step up once volume justifies it — both already have their own line items above.
Shopify Plus	BigCommerce Enterprise	Shopify Plus is faster to launch with the bigger app ecosystem; BigCommerce is stronger for large/complex catalogs and B2B pricing rules with fewer paid add-ons needed.
Ahrefs or SEMrush	Moz Pro	A third SEO option if neither Ahrefs nor SEMrush fits — generally considered a notch behind both on data depth, but cheaper.
DocuSign	Dropbox Sign (HelloSign); PandaDoc	Dropbox Sign (HelloSign) is cheaper per month with a simpler interface; PandaDoc adds proposal/quote building on top of e-signatures.

REFERENCE

Note on Sequencing

None of this needs to happen at once. The Marketing Service Delivery tools are the most immediate gap — they directly affect what you can actually deliver on services already priced and sold today. The AV equipment and insurance matter most right before that side of the business restarts, not before.
